your post flopped. good.

DIAGNOSE A FLOP

Open your last flop. Five decisions made it. Only one of them broke. Here is how to find it.

topic and packaging

LINKS 1-2

Start with the topic, then the title and thumbnail.
Wrong topic, nothing saves it. Right topic, weak packaging, nobody clicks.

the build

LINKS 3-5

Then the structure, the edit and your delivery. Look at retention. Where people leave tells you which one broke.

one at a time

THE METHOD

Check one link at a time, in order. Most founders blame the edit when the topic was the problem.

audit your flop

THE FIX

Take your last flop and audit it this way. Save this so you have it next time a post dies.
